The President is opposed to Prop. 23 – a veiled attempt by corporate polluters to block progress towards a clean energy economy.
PROTECT CALIFORNIA FROM CORPORATE POLLUTERS.

California's clean-tech industry is thriving: More money is being invested in California alternative energy start-ups than anywhere else in the world, and green technology is creating 10 times more new jobs than any other sector.

If Prop. 23 becomes law, that will change. California will lose our worldwide lead in green-tech industries, clean air protections, hundreds of thousands of jobs and billions of dollars in green energy investments essential to our state's economic future.
